

## **RUNNING TRACKS**

We offer different solutions for professional and non-professional running tracks . Professional running tracks are commonly installed with Full Pur, sandwich and spray systems according to IAAF requirements.

We also provide technical supervision, installation and machinery required for installation.

### **SANDWICH SYSTEM**

Traditional system for international competitions. Force reduction meets all international standards. The wearing surface consists of an impermeable coating with selected EPDM granules broadcast into the freshly applied PU compound resulting in a homogenous and seamless granulated topping. The base mat is a prefabricated rubber roll or in-situ base mat installed on site by mixing the rubber granules and the binder in the required thickness by special paving machinery.

Fields of application: Athletic tracks, Multipurpose Fields, School Playgrounds.

## SPRAY COATING

EPDM Layer /Sprayed  
Polyurethane  
SBR Laver

### SPRAY SYSTEM

Impermeable surface for athletic tracks and multipurpose facilities. The top coating is a structural spray coating consisting of a special PU compound premixed with selected EPDM rubber granules sprayed onto the freshly applied PU compound resulting in a homogenous and seamless granulated topping. The base mat is a prefabricated rubber roll or in-situ base mat installed on site by mixing the rubber granules and the binder in the required thickness by special paving machinery

Fields of application: Athletic tracks, Multipurpose Fields, School Playgrounds.
